

3 KEY USES FOR EXPANDED METAL WITH SOLAR PANELS

www.EXPAC.com ♦ (909) 481-8800 ♦ info@expac.com

1 PROTECTION

Did you know that rodents can gnaw on exposed wiring causing thousands of dollars in damage, which is generally not covered by an insurance policy?

Formed from a solid sheet, expanded metal provides a high strength-to-weight ratio to prevent birds and rodents from accessing the space under panels.

2 SAFETY

Did you know that severe weather can cause leaves and other flammable debris to accumulate under solar panels, leading to a potential fire hazard?

Expanded metal is an effective barrier to prevent combustible materials from gathering between the solar array and roof.

3 COMPLIANCE

Did you know that some HOAs now require skirting around the base of solar panels for both aesthetics and protection?

Wallner Expac offers 50 customizable expanded metal patterns that complement existing architectural and may help comply with HOA mandates

EXPANDED METAL FROM WALLNER EXPAC

Single Product, Multiple Applications
